

AITrace sponsor showcase

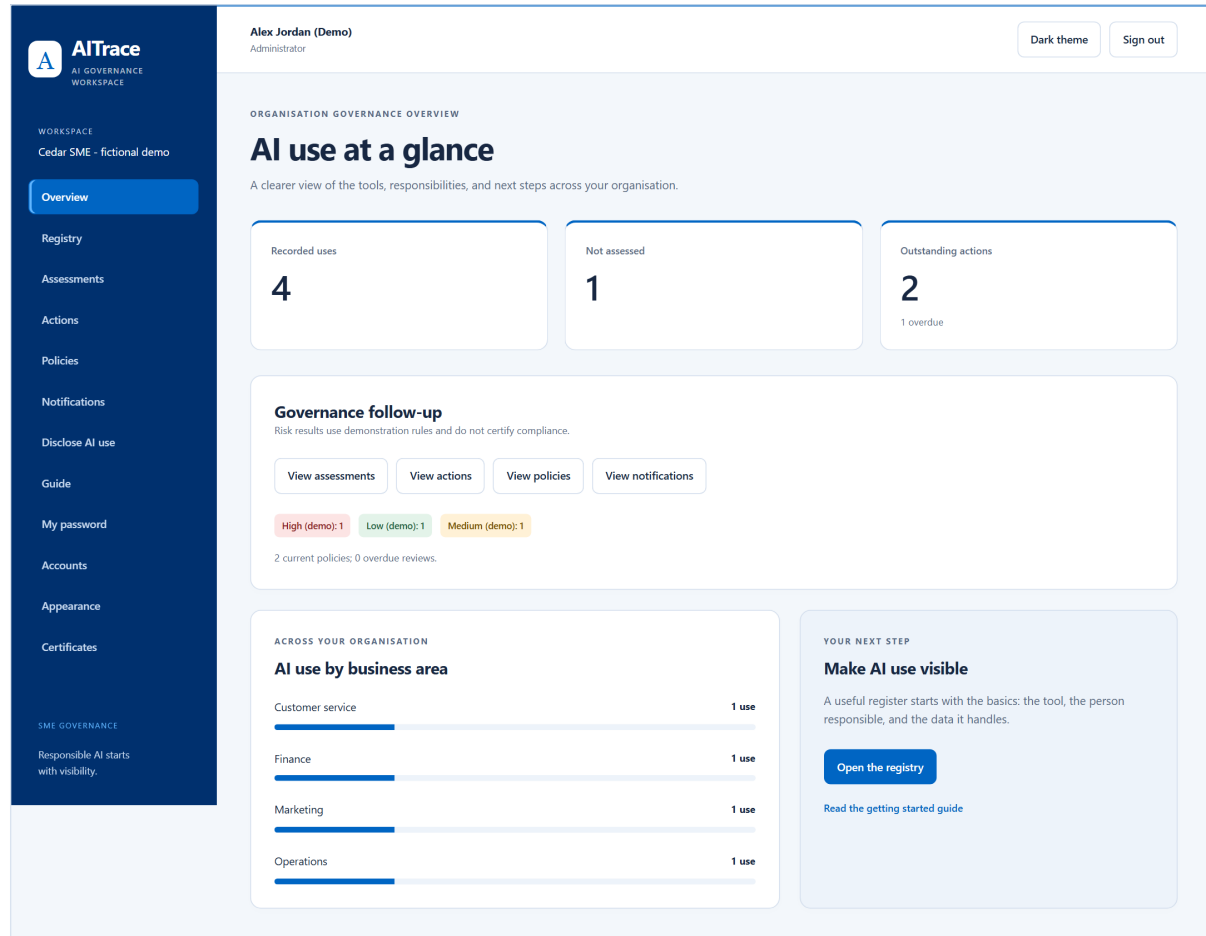

An integrated local prototype for Australian SMEs to record AI use, review governance risks and track follow-up work.

Prepared for Sri Ramakrishna Engineering College
University of Canberra ICT Capstone
Project 2026 S2R 04

The walkthrough follows a practical journey: register a tool, complete an assessment, assign an action, maintain policy evidence and monitor progress.

For sponsor review

Confirm the questionnaire and risk rules, review the SME workflow, and identify changes needed before user acceptance.

The overview connects recorded AI uses, assessment coverage, outstanding actions and policy reviews. The example shows four AI uses and two open actions.

All accounts and records shown are fictional. Risk classifications use demonstration rules and do not certify compliance. The complete screenshot pack contains 32 full-page captures.

Access and guidance

A shared workspace with account-based access and a plain-language starting point.

A simple governance workflow

1. **Record the tools you use.** Capture the purpose, owner, and business area.
2. **Understand the data.** Describe what information each tool handles.
3. **Review and follow up.** Check approval status and export a summary for your team.

Register or disclose AI uses, document their purpose and data sensitivity, complete an approved governance assessment, track resulting actions, and export an organisation summary.

AITrace supports self-assessment. It does not provide legal advice, certification or automatic compliance approval.

Use fictional or appropriately de-identified information during development and demonstration.

Sign in

Users enter their organisation account. Administrators, Compliance Officers and Staff Users have different permissions.

Getting started guide

The guide explains the register, review and follow-up workflow and the limits of the prototype.

Excerpt: 16-guide.png. Both workflows have full-resolution captures in the screenshot pack.

The app runs locally without an AI service or API key. A new installation needs an operator-created Administrator account.

Make AI use visible

Bring formal records and voluntary disclosures into one register.

AI USE	BUSINESS AREA	DATA SENSITIVITY	APPROVAL	ASSESSMENT	ACTIONS
Meeting summary tool Staff disclosure	Operations	Internal	Not reviewed	Not assessed	<button>View</button> <button>Edit</button>
Marketing copy assistant	Marketing	Public	Approved	Medium (demo)	<button>View</button> <button>Edit</button>
Invoice review helper	Finance	Confidential	Not reviewed	High (demo)	<button>View</button> <button>Edit</button>
Customer enquiry assistant	Customer service	Public	Approved	Low (demo)	<button>View</button> <button>Edit</button>

AI use registry

Search and filter tools, inspect ownership, sensitivity and approval, and export PDF or CSV summaries.

Disclose an AI tool

Staff can report an unregistered use. It enters the register as Not reviewed for a manager to assess.

Excerpt: 03-registry.png. Both workflows have full-resolution captures in the screenshot pack.

Approval is separate from risk. Details, edit forms and decision-history captures are included in the screenshot pack.

Assess and explain

Save progress and retain an understandable record of the assessment result.

Assessment result
Definition sme-demonstration / v1 · revision 2

High (demo)

- Demo rule: important outputs without human review need priority attention.
- Demo rule: personal or sensitive information needs a documented data review.
- Demo rule: suitability testing has not been recorded.
- Demo baseline; higher-priority matching rules take precedence. This is not compliance approval.

Suggested follow-up actions

- Assign a human reviewer for important outputs.
- Review the data-handling safeguards.
- Test the AI tool for its intended purpose.

▼ Submitted answers and source trace

Does this AI use process personal or sensitive information? **Yes**

Is a responsible person reviewing important AI outputs? **No**

Has the tool been tested for its intended purpose? **No**

Are affected people informed that AI is being used? **Yes**

AITrace synthetic demonstration rules v1; not framework-prescribed thresholds.

Save an assessment draft

A versioned questionnaire can be saved before it is complete and reopened later.

Understand the result

Submitted responses are retained with the matching rules, explanations and suggested follow-up actions.

Excerpt: 09-assessment-result.png. Both workflows have full-resolution captures in the screenshot pack.

Current questions and thresholds are synthetic examples. Sponsor-approved content remains a decision before real governance use.

Act and retain evidence

Give follow-up work an owner and keep policy evidence connected to the assessment topics.

Action register

Filter by status

All statuses

ACTION	OWNER	DUE	STATUS	HISTORY
Confirm a human reviewer for replies Customer enquiry assistant Edit action	Taylor Reed (Demo)	2026-09-25	Complete	▶ View history
Document the customer disclosure notice Marketing copy assistant Edit action	Casey Morgan (Demo)	2026-09-26 Overdue	Not Started	▶ View history
Confirm invoice review safeguards Invoice review helper Edit action	Alex Jordan (Demo)	2026-09-27	In Progress	▶ View history

Track actions

Managers assign an account, due date and status, optionally linking a submitted assessment. Updates retain history.

Manage policy versions

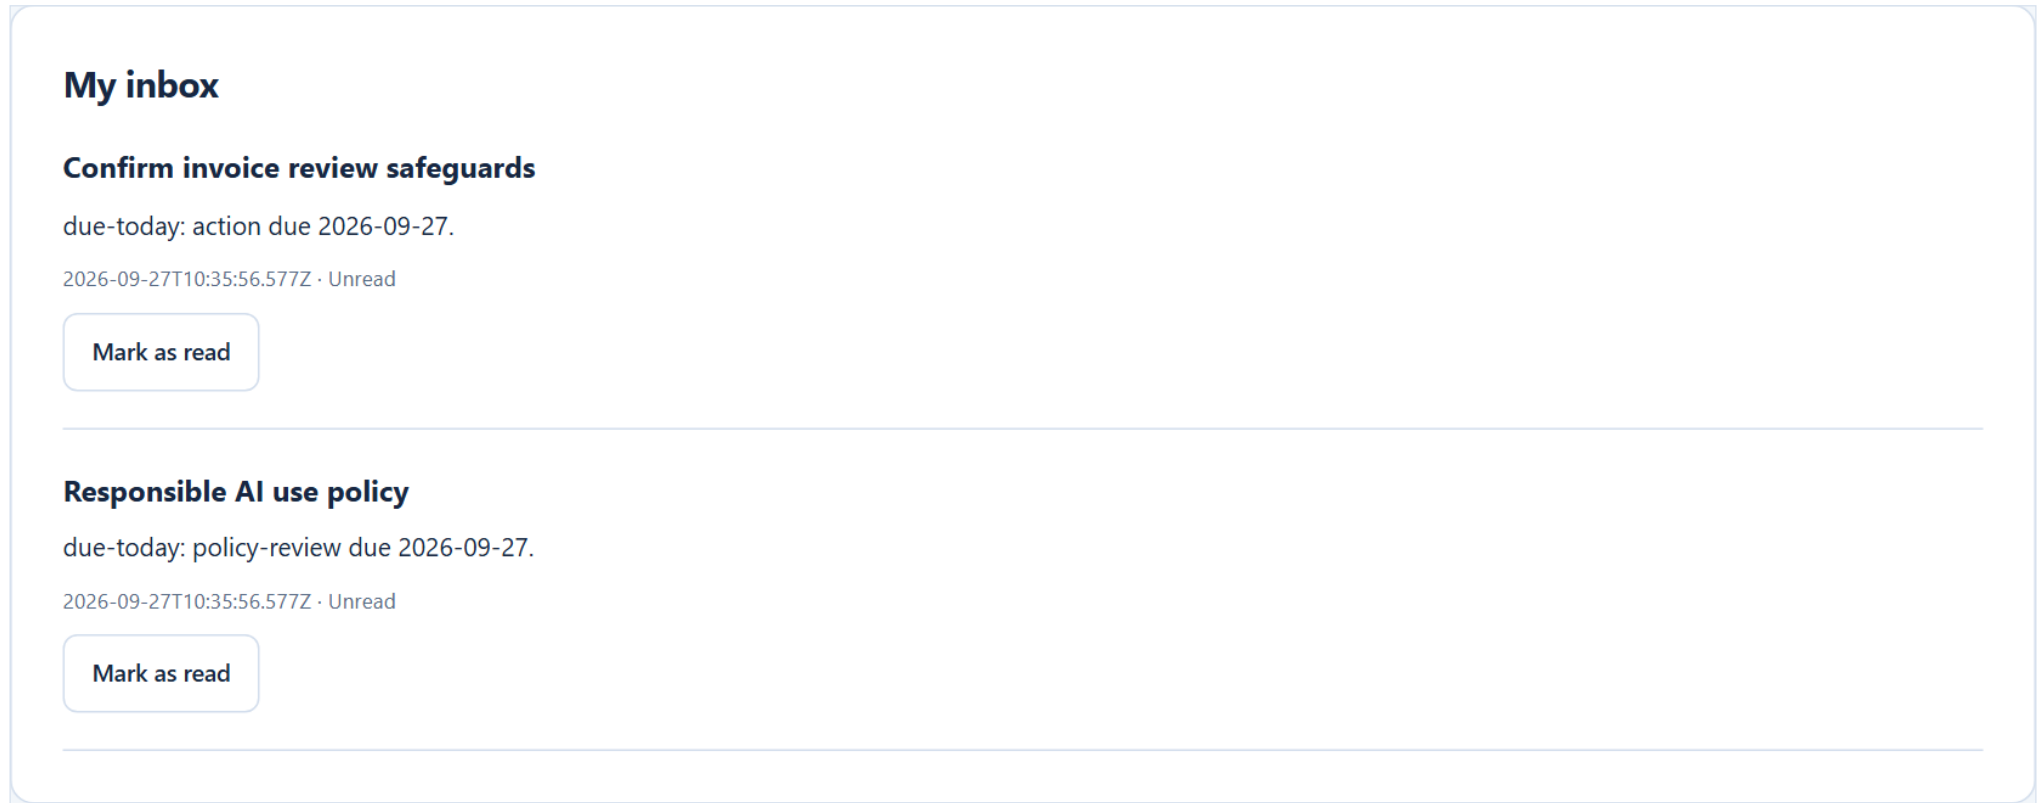

Upload PDF or text files, link checklist topics, assign a reviewer and set the next review date. Earlier versions remain available.

Excerpt: 10-actions.png. Both workflows have full-resolution captures in the screenshot pack.

The excerpt shows saved actions. Full-page captures include the policy library, creation and upload forms. Staff can read assigned actions and policies.

Keep follow up visible

Reminders connect approaching deadlines with the person responsible.

Notifications and timing

Administrators configure reminder timing. Managers can run a check, and recipients receive an individual inbox.

Assigned staff work

Staff see the actions assigned to them; managers control status updates and the wider action register.

Excerpt: 14-notifications.png. Both workflows have full-resolution captures in the screenshot pack.

Reminders are in-app and require the server to run. Repeated checks do not duplicate the same eligible notification; no email delivery is configured.

Manage accounts and access

Administrator controls support the everyday account lifecycle.

MANAGE ACCOUNT

Casey Morgan (Demo)

showcase-staff

Reset password

This signs the account out on all devices. Share the new password securely.

Fields marked * are required.

New password *

Use 12 to 200 characters.

Confirm new password *

Use 12 to 200 characters.

Reset password

Close account controls

Role and access

Disabled accounts cannot sign in. Access changes end existing sessions.

Fields marked * are required.

Account role *

Staff User

Account status *

Active

Save access

Account directory

View and search organisation accounts, create users and inspect recent account activity.

Password and role controls

Reset passwords, change roles or disable access. Resets revoke sessions and require a new password at the next sign-in.

Excerpt: 18-account-controls.png. Both workflows have full-resolution captures in the screenshot pack.

Passwords are not displayed in the directory. Separate captures show account creation and the mandatory password-change flow.

27 September 2026 | Fictional demonstration data | Capstone prototype

7 / 9

Configure the workspace

Choose a consistent appearance and prepare the local HTTPS certificate.

Connection and staged certificate

Current server connection: HTTP

Certificate: Temporary development certificate (self-signed)

Expires: Oct 27 10:35:56 2026 GMT

Activation: Pending server restart/configuration

Updated: 2026-09-27T10:35:56.241Z

Temporary certificates last 30 days and are not browser-trusted. They are for local demonstration. Keys are stored on the server and never returned by this page.

[Generate temporary certificate](#)

Organisation appearance

Select SREC blue or Slate. Each person can also choose light or dark mode.

Administrator certificates

Generate a temporary self-signed pair, inspect expiry and stage a matching replacement certificate and key.

Excerpt: 21-certificates.png. Both workflows have full-resolution captures in the screenshot pack.

Certificate activation requires server configuration and restart. Temporary certificates are not publicly trusted; encrypted storage and trusted deployment remain operator acceptance tasks.

Personal security and sponsor review

The application also provides self-service password changes and responsive layouts.

Change your password

Fields marked * are required.

Current password *

New password *

Use 12 to 200 characters.

Confirm password *

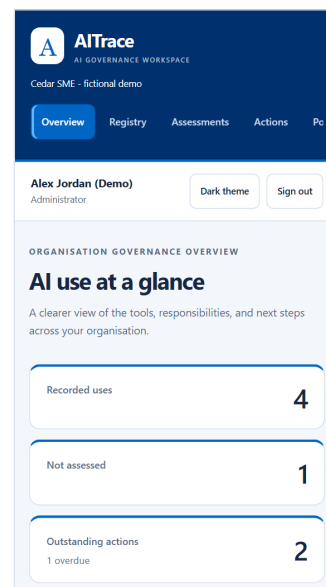

Use 12 to 200 characters.

Change password and sign out

Verify the current password, choose a new one and sign out existing sessions. The reset flow requires this step before returning to the workspace.

Implementation checks passed: 68 application tests and 21 browser tests, including automated accessibility checks. Human SME and screen-reader UAT, sponsor content approval and final handover remain outstanding.

Mobile and role views

The screenshot pack includes mobile overview and registry views, Staff and Compliance Officer workspaces, and both alternative appearances.

Suggested sponsor discussion

Are the roles and workflow right for the intended SMEs?

Which questions, explanations and actions should the approved assessment use?

What evidence is needed for the final demonstration and acceptance?
